FUTURE FENCING

SOLUTIONS

Key Features:

- Stone wall effect design
- Coping stone available to complete that stone wall illusion.
- Posts & Coping stones are colour matched.
- Concealed cavity within the anchor posts to help hide cables for any lighting system.
- Foam filled – May help with dampening sound pollution from surrounding area.
- Great for screening areas such as patios, terraces or around the hot-tub!
- All the features of a stone wall at a fraction of the cost.

Key Benefits:

- Privacy Screening like no other!
- Easy to Install
- No Painting required
- No Maintenance
- No Rotting
- No Warping
- Easy to clean
- PE foam filled, creating a robust panel
- Water Feature & Self-watering planters available
- Designed to withstand the British weather
- 10-year manufactures guarantee

Five Colours Available:

Millstone Grey

Desert Sandstone

Black Magic

Moody Blue

Moss Stone Green

Product Details:

The product is made from a virgin MDPE (medium density polyethylene) with a UV rating of 15 (*standard rating being only 8*). The same MDPE that we use for products in the Health Care, Military, Marine & Highway sectors.

Panels are manufactured in two sizes:

Small – 300Hx1810Wx100/110D – 8.5kg

Large – 1530Hx 1810Wx100/110D – 30kg

Anchor posts are available in three sizes:

Intermediate - 2340Hx130Wx190D – 16Kg

End - 2340Hx130Wx190D – 16Kg

Corner- 2340Hx190Wx190D – 17Kg

Coping Stones Dimensions:

65Hx1118Wx200D – 3Kg

(2no. coping stones required for each 6ft panel).

Waterfall & Planter Base Dimensions:

300Hx1810Wx400D

The Panels are foam filled, producing a high-density product. This can help towards reducing sound pollution from the surrounding area.

The 8ft posts are manufactured with an anchor boot at the base with access holes for the cement to fill. This provides a firm structure and stability for the panels when erected. The posts also have room inside to allow for any wires required for a lighting system to be concealed safely away from the weather/rodents or children.

The coping stone is purposely designed hollow, this helps with hiding any cables from a lighting system that may be introduced, it also allows for any mitre cuts that may be required due to the angle of the installation that the installation dictates.
